Advice

Important advice to read

The *Tasmanian Councils' Standard for Subdivisions* is published by the Institute of Public Works Engineering Australia and the Australian Water Association on the understanding that:

- The document information is intended to be used by designers as a reference to ensure that a common approach is taken throughout Tasmania in the creation of new public infrastructure assets in subdivisions. The intention is for designers, rather than use the document in a 'cut-and-paste' approach, is to professionally integrate the information contained in the document into the particular designs for their client. The designer will remain fully responsible for all aspects of their design.
- The document information represents a minimum standard. A Tasmanian Council may require a higher level standard than that stipulated as a minimum standard where there are justifiable reasons to do so.
- The Institute of Public Works Engineering Australia and Australian Water Association and individual contributors disclaim all and any liability to any person in respect of anything, and the consequences of anything, done or omitted to be done by a person in reliance upon the whole or any part of the *Tasmanian Councils' Standard for Subdivisions*.
- The *Tasmanian Councils' Standard for Subdivisions* does not purport to be a comprehensive statement and analysis of its subjective matter, and if further advice is required, the services of a competent professional should be sought.
